DETAILED ACTION

The Drawings

The drawings are objected to under 37 CFR § 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the means for varying the spacing between the excitation light illumination portion and the light detecting portion specified in claim 19 must be shown or the feature canceled from the claim. Any change in the drawings with respect to the means for varying the spacing between the excitation light illumination portion and the light detecting portion must be accompanied with a corresponding change in the detailed description of the invention in the specification. No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR § 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. The replacement sheet(s) should be labeled “Replacement Sheet” in the page header (as per 37 CFR § 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. § 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. § 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR § 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. § 103(c) and potential 35 U.S.C. § 102(e), (f) or (g) prior art under 35 U.S.C. § 103(a).

Claim 18 is rejected under 35 U.S.C. § 103(a) as being unpatentable over Yurino et al (WO 00/68668), of record.

Yurino et al disclose a substrate (10) with samples (11) on the measuring surface thereof, wherein the samples are arranged on more than one circles which are concentric with the central axis of the substrate and are different in radius from each other. Yurino et al do not disclose specifically that the samples at the same distance from the central axis have the same or similar attributes.

At the time the invention was made, it would have been obvious to one with ordinary skill in the art that how the samples were placed on the surface of the substrate would have been

Art Unit: 2877

the choice of the user and would not have involved an inventive step.

Allowable Subject Matter

Claims 1, 6-17, 19, 24, 25 and 28 are allowed over the prior art of record.

Applicant's arguments with respect to claims 1, 6-17, 19, 24 and 25 on pages 7-9 of the amendment filed May 24, 2004, have been fully considered and are persuasive. The rejection of the claims has been withdrawn.

Remarks

In line 2 of claim 15, "position" should be changed to --portion-- to correct an obvious typographical error.

With respect to the means for varying the spacing between the excitation light illumination portion and the light detecting portion specified in claim 19, see the paragraph bridging pages 2100-224 and 2100-225 of MPEP § 2181 (Rev. 2, May 2004).

Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR § 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR § 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however,

Art Unit: 2877

will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
